

SARS-CoV-2 Rapid Antigen Test

**Now available at Capital Medical Supplies for Medical Practitioners only
(no home or self testing)**

The benefits of the SARS-CoV-2 Rapid Antigen Test:

- Getting a quick result within 15-30 minutes – no need for a follow up appointment to discuss the result
- Easy handling, only a one off 30min training (AHPRA number required)
- No instrument required
- Allowing decentralized testing or access to testing in areas where laboratory testing is not available

Specificity: 99.2% (Proportion of patients without the disease who test negative)

Sensitivity: 95.5% (Proportion of patients with the disease who test positive)

AirPhysio is a mucus clearance and lung expansion OPEP device. The device uses an all-natural process called Oscillating Positive Expiratory Pressure (OPEP). This assists the body's natural cleaning process. This helps to maintain optimal hygiene in the lungs and restores lung capacity.

Used in the Treatment of respiratory and severe respiratory conditions.

These conditions hinder the body's ability to clear the contaminated mucus. Your lung capacity is reduced by 5-25 ml/yr for asthmatics and 33 ml /year for smokers. This may cause breathlessness after a small set of stairs or a light jog.
